

Environmental Permitting (England & Wales) Regulations 2016

Application for a Permit part B from Sandwell Council

Supporting Document DAB2Identifiedemissions

(i) Emissions from the high level stack controlled the drying and production process will be measured by a continuous particulate monitor. This will be at a level below 50mg/M³. These levels will be recorded.

(ii) Emissions from the stocks piles and transfer of materials to the dryer are controlled by covers and will be minimal. Monitoring will be undertaken by trained personnel and will be recorded in a daily environmental log.

Control measures include:

- covered stock bays for material under 5mm nominal size
- covered aggregate feed hoppers
- covered aggregate conveyors and transfer points
- production process all vented via a dry cloth bag filter
- drying process vented via a dry cloth bag filter
- filter fitted with a continuous particulate monitor with set alarms
- bitumen tanks vented at ground level
- roadways all subject to water dust suppression
